The finest winter read I can think of is "The Vanishing Trout" by Charles Lose. You will learn nothing about tying knots or increasing your casting distance, but you can get that stuff anywhere. You will learn about the ways of mountain freestone trout and gain a second-generation conservationist's perspective on the land use practices in PA during the industrial revolution. Unfortunately, it's out of print so you must buy second or third-hand on-line. My wife spent about \$70 to get me a copy for my birthday several years ago, but it was well worth it. It is one of the half-dozen or so books I pick up regularly for pure enjoyment.
