Trout move, so I don't know why everyone blames lack of stocked trout on Poaching. While it may be the case, it's been found that stocked trout move as soon as they are put in streams for many reasons, in this case it may have happened because of the hurricane. See the trout movement study on the PFBC web site for details. If the water was low when the trout were stocked, they may have gone to where the conditions were marginally better. Then were moved by the flows during the Frankenstorm.
