Please take your camera along and provide location information when you spot something that does not look correct. Usually there's this gut feeling when something is out of the normal. Usually like a person with 50 gallon drums would surely get my attention especially when there are vessels that can hold much greater amounts and can be filled faster.

It is great to know that there are alot of us out there that do care about the environment. I keep telling myself to bring a garbage bag with me where ever I go fishing and help keep the area cleaner.
