Chaz is correct, but it is worthwhile fishing in spring for stocked trout as it is a larger (wider) stream than the norm in SE Pa. It also has some nice hatches. The rare fly angler fishing there on opening day can do very well with PT nymphs...that's all I have to say about that.

It is also stocked for quite some length....from Kempton to the dam in Lenhartsville, so there is plenty of elbow room. If you snoop around on the off season you may be able to find some of the more picturesque spots. There are some to be found.
