Not to thread jack or anything. But can you say, put a tippet ring at the end of a 9' leader for example, then add say 2 feet of tippet to your fly? Will the tippet ring cause surface drag?

No. I fish tippet rings on the end of my own knotted leaders for Tricos. The leader and tippet are 12 1/2 ' to 13' in total length. IMO the leader does not drag anymore with the tippet ring than without.
