I fished the LL about two weeks ago and I noticed a significant drop in fish numbers. I'm from Jersey so I don't fish the stream a lot, maybe once a month or so, but I have fished it for more than 15 years and I have noticed a steady decline in insect activity and numbers of fish. One time I went up to the upper section on Cherry rd. and saw something that really was disturbing. Corn was planted in a field almost up to the stream bank. there was silt in the stream in all of the soft areas downstream.

This can't be good for the health of the stream. I have stayed downstream in the Heritage section lately. I just think that the overdevelopment has had a negative impact on the stream.
