No way should the hatchery reopen, I fish Sawmill at least once a month. Yes there are plenty of non native browns, there are also plenty of native brookies. If I catch a snakehead it is illegal for me to return it to the water. So how does stocking non native browns and rainbows make a stream better? Sawmill is great stream that doesn't need pollution being dumped into it. I don't understand how any trout fisherman would be in favor of stocking in the first place. Stocking is nothing more than a band-aid. Is it not illegal to introduce non native species into our waterways. I guess breaking the law is ok if your the PFBC and you need to sell licenses. Resource First, since when? Sorry if my view seems harsh, but I'm tired of seeing hatchery trash being stocked in wild trout streams. The only trout native PA are brook and lake trout, conservation and restoration is what's needed and stocking is neither. Here's a few pics of Sawmill I took a couple weeks ago.
