not devils advocate, just trying to let folks know that there are better ways to clean an filter the water before it leaves the hatcheries, and it is in use currently. Does it cost anything? Sure it does, but it also costs money to raise fish as well as to let em loose.

When i was younger i had a notion this was in the 90's of buying some land with a spring source of water an raising trout or buying a Trout Hatchery. I also toured a few aquaculture farms that were done properly. It can be done , it does cost money, and that is the balancing act.

Would i prefer Hatchery fish over Wild? Sure, but it really depends on what stream we are talking about. The Enviroment is no where what it was when William Penn bought this land. Can you imagine what the streams were like then, and the water temps? No siltation or eroision?

Hatcheries as well as co-op hatcheries like the one on the Lizard creek help raise an awful lot of trout for streams that wouldn't have them there without stocking for various reasons.
