The Po is *supposed* to be one of the tailwaters under consideration for the tailwater enhancement program.  
From [this](#) article:

“Therefore, the commissioners direct the executive director to actively seek and maximize opportunities available to protect, conserve and enhance, wherever possible, wild-trout populations in tailwaters below existing reservoirs.”

What a great idea! Let's enhance the Po by pumping lots of fish crap into it!

Wanna see what the wild trout population in the Po can become? Let's start by making the WHOLE LENGTH of the stream below the dam C&R regs - w/no stocking. And how's about making the stretch between that ridiculous Parryville dam down to the mouth a no fishing thermal refuge area? Better yet, rip that damn dam out. Let Palmerton get their water from the Aquashicola. Jeez, it runs right through town. Or pump water from the Lehigh - it's much closer than the Po.

Create a top notch tailwater fishery out of the Po, and the Cressley's would be too busy making beds, and cooking breakfasts at their bed & breakfast, instead of making rubber fish to be stocked for Lunkefest. The fish that are currently stocked in the Po could be stocked in the Lehigh. The 20 grand per year that the LRSA has to raise for stocking could be used to purchase leases/easements on the Po to increase and improve angler access.

Who's with me? 😊
