Absolutely! Bring your midges, nymphs, streamers, and even some micro caddis. The section from the dam to the split will be your best bet as the the water will be most influenced by the bottom release. For top water action, the section just above the bike bridge to the bridge above.... Or the section just above the cassleman.. I would fish the section below the bike bridge if using streamers / nymphs.

Of course ... its always dependent on the release levels.
