To fix the Susq problem - start raising hatchery SM & release them the 1st week in June, and then once in September. WALA - there's SM in the Susq !

Why isn't that a good idea? After all that's how you & I manage the creek fishery isn't it? We're OK with doing this year after year after year after year

It's a valued tradition to defend. That's why there's no need to let the hatchery trout stocked in the Fall survive to April or even next June, let the creel limit wipe em out by winter. It's a tradition.

If we need more hatcheries for the SM, let inmates in the state prisons run them and feed the fish pellets made from the food scraps. Those fish would be the best fed on earth. Can we put just 5% of them in the Schuylkill ?

Hatcheries & put-n'-take that's the ticket !!

Sorry, thanks for letting me rant
