DJ, The spliced joints work and a lot of guys use them, but personally I would go with ferrules. You can get cheap ones on ebay that can be used for prototyping or for your first few while you working out the process. The ferrule weight does contribute to stress and alters the action of the rod, so I think it is important to get a feel for that when starting out

Rolf, those Herter's tensioners are great. I built a fancy wrapping station for my first few rods, but I now use the Herter's for everything. If DJ doesn't take you up on that offer and you are still looking to get rid of it I would be happy to make an offer to buy.

Mike.
