The prince has never been very productive for me. I have no idea why. I read George Daniels nymph book and decided I needed to add some more to my box.

This past weekend I tied up a some smaller ones. (Maybe if the big ones weren't working, the smaller ones might change my luck.) Who knows? I don't have any answers only questions.

The one thing I noticed about his were that they were heavy and the white Biots were tight together.

Nothing but questions on this side, but they obviously work for most people.
