The Prince Nymph is also one of my go-to patterns, especially for Brook Trout. I have a surplus of these Sz. 14 Scud hooks with an offset hook point. They really hook up great on my dropper rigs. Since the Prince Nymph has never let me down and these scud hooks "hook up" so well, I decided to tie up some Prince Nymph Scud hybrids.

I modified the Prince slightly with the addition of ultra fine neon green wire and a few wraps of brown Ostrich herl for general bugginess. The fly looks buggier with the herl added while keeping the slim profile of the traditional Prince Nymph. I'm looking forward to trying this one out.
