This time I'm not going to step on it. My primary leader is. 9.5' add about 2' of colored sighter and tippet gets tied to that. I use up to and sometimes more 6' level tippet. My leader starts at 30 lb. And goes down to 8lb, I use the 60% method to make it. Works well and I can cast it nice with a single size 18 tungsten bead fly if needed. I use a floating line to that so I can switch to a dry dropper n a pinch. I can use this set up for long line and short line nymphing.

I had tried a 25lb but section and worked alright, the 30 casts better. I'm happy with that leader, I don't use the 30 ' leader much. I need to practice with it more on a place other than ffo areas. Lol

The long line nymphing method is designed for short drifts btw
