Re: Dunbar explosion? #12

Mr. Sarcasm here

boy that really sounds like a peaceful tranquil place to spend the day fishing worrying about death from noxious fumes and hell bent atv riders shooting you in the arse and stealing your gear! 100 fish is small deep hole can anybody say fish in a barrell?

Re: Dunbar explosion? #11

From a public health standpoint that is a troubling possibility. I did not detect a Cl smell, but more of a sulphur smell. At the very least this is a driving hazard. If this is something that occurs on a regular basis, it should then be clearly posted in the general vicinity.

Re: Dunbar explosion? #10

ryanh,

— I too have experienced the vapor cloud on more than one occasion in the low lying stretch of paved roadway near the downstream start of the project waters. From my experience as a hazmat technician, I believe it is a chlorine based product used in the mining operation up the mountain. Chlorine as a gas is 2.5 times heavier than air - hence, it rolls down the mountain to a low point. It also has a greenish/yellow color, which was what I observed.

It is somewhat diluted by the time it reaches the roadbed, otherwise its properties as a poison would have caused more than one accident - severe irritation to the eyes & respiratory system. It is also very corrosive to metals other than brass when in high concentrations.

JamesD.

Re: Dunbar explosion? #8

A guy at work was telling me that he went with a friend to that SGL, and his friend told him that the folks down there consider that land theirs.

Re: Dunbar explosion? #7

Try terrestrials like big black ants. Or beetles. Or green inchworms. I think that will catch some fish.

~~Not sure if that will help with the explosions, masked ATV riders, car vandalizers, knife displayers, drug plantations etc., though.~~

Re: Dunbar explosion? #6

DFG,  
Yes and no about the micro flies. I didn't really count that as fishing. I mean the fish were confined to a small area, there had to be over 100 of them, and there wasn't any current. I would have been hard pressed to fish that fly if it would have been in moving water. But it is a start for me I guess...

Re: Dunbar explosion? #5

All the fishermen who have run into problems there, been harassed, seen illegal activity etc., should get together, compile all these accounts, and send a letter to the proper authorities, describing what goes on out there, and asking that law and order be returned to this area.

Send it to everyone you can think of: Game Commission, Fish Commission, state police, state legislators, governors office, the drug czars in Washington DC, if the "cash crop" rumors are true, FBI, the major newspapers, etc.

You could organize via the Internet. You could create a name for your group, even if it's an informally organized group.

There's a lot of law enforcement people in PA and the nation and it looks like they've got some work to do in the Dunbar area. The role of the citizens is to make sure that they know about the problem.

Re: Dunbar explosion? #4

When I went there during the spring I saw something similar, the smoke was on the yellow side, I thought it was from mining, maybe dust from a truck full of waste, it had a smell but not like smoke.

Re: Dunbar explosion? #3

I've seen blasting caps along barren stretches -- in terms of trout -- of that stream before. It's sickening. But then, they have to protect their cash crop somehow.

Re: Dunbar explosion? #2

Ryan,

I remember your post a short while ago asking if tiny flies were really necessary - I'm sure you got the answer now after fishing that low clear water.

As for the explosion - who knows - anything is possible in that area.

I had my car broken into twice while it was parked just outside Connellsville

Dunbar explosion? #1

Fished Dunbar on Sunday. Water was quite low. Fish limited to pools, jackdams. Caught a brook and a brown, missed a few. They would inspect everything that I threw, but would only take micro patterns. Fish seemed to be in good condition. Were actively surface feeding on midges.

More interestingly on the way out by the Dunbar mine I drove through what I first thought to be fog. It turned out to be smoke, with an explosive smell to it (sulphur) It reminded me of an army smoke grenade. I had 0 visibility for about a 1/2 mile. I did not hear any detonations, so I have no idea what it could have been. It is entirely possible that one of the Fayettecong got ahold of, and did set off a smoke grenade. NOTHING OUT THERE WOULD SURPRISE ME!!
