First, the overall warming trend the Juniata hit 90 degrees in places ("treated" fracking fluid)? Last, urban and suburban runoff is occurring at an alarming rate. Just thoughts, not facts!

Para,

+1

I agree. I used to fly fish the lower Susquehanna all the time. I saw a huge fish kill back in 03' when I was wading upstream from the Statue in Perdix, and I saw with my own eyes thousands of YOY with a white fungus spot on their back gasping and dying in the near 90 degree water.

When I post, on this forum and others, most attack me for telling the truth!

Fishidiot, and others, post some charts that are good for me to see. I try to keep hope..... maybe this year things will be a little better?

All the runoff now has pharmaceutical drugs, fracking chemicals, sewage from the outdated sewage plants, rock snotgrass, and silt everywhere. It used to be a "world class" gravel bottom paradise only 30 years ago!

I keep my fingers crossed, and I shouldn't complain God knows that I have already caught way more than my share! It's just hard for some of us who experienced the Heavenly Paradise to keep our mouths shut while this beautiful river dies right in front of me!
