This is a complicated subject at best. That stretch of creek is officially "closed" by the county to fishing. I actually just had a conversation about it with Jeff Sabo, the WCO for our area. He has asked the county to open it, but they don't want to. In order to fish that stretch, you have to get a special permit from the county, which needs to be for research purposes. The Monocacy Chapter of TU may pursue doing that, and allow members fish there to help determine the health of the stream. To be honest that stretch of stream doesn't hold a lot of fish though. If you have any more questions about it please feel free to PM me.
