are there wild fish in the delayed harvest section? ...is there and riffles upstream of that area?

Yes, there are wild fish throughout the stream. The DHALO is stocked (although I don't catch many stockies there) while the FFO upstream is not stocked. FS has some riffle areas, more than Letort or Big Spring generally, but it is mainly a "classic" style limestoner - that is to say.... mostly low gradient and weedy.
