To heat the shrink connector, I have used my wife's iron. Sit the iron on a flat surface to heat up. Set to moderate temperature. When it is warmed up, I hold the line with one hand on each side of the shrink connector sleeve. Simply roll the sleeve up and down over the pointed end of the iron until the sleeve has shrunk down. Careful not to over do it or you may damage the sleeve or worse, the iron. Then you'll be in trouble with the boss.
