Square tail, the upper head waters is 100% fishable. I would say from Lilly to the Hughes borehole is about 3 miles of stream. The section I want to improve the habitat on is in the town of Cassandra. There are plenty of angling opportunities here.

The lower end will take huge efforts and a lot of time to get cleaned up. We are cleaning the upper end of on of the AMD effected tributaries now. With the wetlands installed, and from opinions gave to me by a DEP guy, in about 2 years aquatic life should slowly make its way down stream. There are a few more AMD seeps on trout run that once cleaned up will have about 3-4 miles of stream from martindale to where it meets the little conemaugh on route 53.

I know this effort will take a very long time to clean the whole stretch, but look what happened with Stony Creek and SCRIP. It is my dream to one day fish the stretch of the Little Conemaugh from Lilly all the way to South Fork. It is a dream right now. But I will do my best to improve the areas that are sustaining aquatic life and fishing opportunities.
