the secret is out!

for those nymphing maniacs...you can furl some bright orange to make your own sighter, then simply nail knot to the fly line and a handshake knot to the shorb loop on your furled leader...tippet ring and there it is. put em on the bank.

**has anyone ever treated the furled leader with silicone for supreme buoyancy?**

Yup.....Mucilin silicone (green container) works really well. The container leaks and it's a real PITA, but it makes your leader float really well.
