the secret is out!

for those nymphing maniacs...you can furl some bright orange to make your own sighter, then simply nail knot to the fly line and a handshake knot to the shorb loop on your furled leader...tippet ring and there it is. put em on the bank.

has anyone ever treated the furled leader with silicone for supreme buoyancy?

Yup.....Mucilin silicone (green container) works really well. The container leaks and it's a real PITA, but it makes your leader float really well.
