Guppie an 8wt is the way to go for LM. As far as leaders go don't waste your money buying leaders. Depending on the structure your fishing and the flies your using you will only need a few spools of mono for all your leader setups. If your fishing mostly open water,subsurface weed beds go with 8ft of 8 or 10 lb mono. If your fishing deep weed beds change length to 10-12 ft of Florocarbon. If your fishing surface weeds or around timber with top water or intermediate flies go with 8ft of 15lb mono. If your fishing Big deer hair bugs in heavy cover like bumper to bumper Lilly pads go with 6 to 8 feet of 20 lb mono. Remember the heavier the cover the harder you need to hit them to set the hook and strip like hell to get them out as fast as you can. Good luck guy.
