I think a 10 and higher is the best wt for the surf. I know people will argue but a 8 dosent cut it in most cases. like fishidiot said it good for back bays and on a nice day but the ten is going to get you more distance. wind change quite often and a 10 to 15 mph will kill your cast. distance is everything of the beach. even a 20 inch striper feels good on a 10 wt.
