What abuse?

Dude, I had a great time Saturday. Just want to see you be prepared with your own ties that you'll need shortly.

On the comparadun...

Try tying in the wing at the 2/3 point on the shank. Your wing is creeping forward too much on the shank.

The wing should be the length of the shank in height.

Dub in front of the wing too - I don't see any dubbing up there...

Remember - after you stand up the wing, one wrap of dubbing tight to the back of the wing, next wrap tight to the front of the wing. You still need to dub more in front of that - dub right up to just behind the eye, and leave just enough room to whip finish.

Problems? Feel free to call....

H.A.
