This is kind of a tough one, sometimes I have four boxes with a few of each bug/family/phase. Lately I'm wanting to have a box(again) for stones, caddis, mayflies, streamers, soft hackles, all nice and neat in their own boxes. Problem is I go back and forth about this I never seem to get them to their own box. I'm getting closer, I have just got the stones done. It's a start. I do have a box just for the brookies as well.
