If you've got \$50k plus thousands of hours of your own time to invest, you could build an app like this. It's a commitment and not just a project.

Through this app, I've developed a very unique platform for delivering quality mapping and navigation along with location specific information to allow users to make informed decisions about their destinations.

I am leveraging this unique platform to provide similar apps for businesses and government agencies which I can now do at far less cost.

I am already the developer of the PA Game Commission's app which evolved from this project. Their app will also benefit from the newest developments in this app. Apps require continuous attention and must evolve to be successful.

If you want to get into this business, I warn you, it's not a hobby! Sure you can build an app cheaply but that is why there are so many "Crap Apps" out there. I won't go there!

If you want to get in on the testing, please email or PM me.
