MC, I had similar experience on the Davidson River in North Carolina a few weeks ago. In actuality the pressure is greater than it would normally be. Also due to competitors being assigned a beat they rarely show the same consideration a normal fisherman would to others because they cannot hop in the car and go downstream a mile. Add to that most trout waters are shut down which concentrates pressure on these four streams anyhow and it will be a crappy weekend for normal fisherman to be in central Pa that weekend.
