I believe the LJ River Assoc takes manual measurements. A monitor may be of vale to them. It would also provide hourly (I presume) so it would help to understand how stressed the stream was during warm periods.

I only ever fished the LJ once. As I was starting to enter the water a vehicle pulled up and a fellow got out and took the water temperature. He spent probably 20 minutes giving me a rundown on the current hatches, best stretches, etc. Turns out it was Bill. I haven't made it back but I enrolled as a life member to the association.

If the association created a fund to pay for the monitoring I would contribute.
