Gills Freeze, that's the first time I've ever heard that. They would go into stasis before their gills would freeze.

I won't fish a stream that has ice along the edges and I won't fish when my guides freeze. Cold weather is no concern for trout unless anchor ice is involved. Even anchor ice is uncommon in most of the Commonwealth. As long as the water in a stream is flowing there's seldom anchor ice.

sorry thought i read somewhere if it was really cold out and if u kept them out of the water for to long that their gills would freeze
