"First, a PFBC list of upwards of a thousand class A streams is not "outing" those streams...."

What? It ceratinly is outing those streams. It just outs them all and gives anglers their choices. This is why a free flow of information isn't bad. It is the restricting of information that causes certain waters to be "singled out." There is some circular logic being applied here. "It is OK to talk about some streams, but not others." What is the result of that? Simply put: the singling out of some streams over all others.
