I was just thinking about how long it will take to catch fish flyfishing because. This is my first year I will be going out. And was wondering how long it took you guys to catch your first trout flyfishing. And any tips that might help out on the stream I will mostly be going for brook and brown trout on a stream called little mahonning fly project and tionesta river in forest county if you guys have heard of those. I've heard the wooly bugger would be simple and effective and will be fishing with a redington crosswater.

Any info is appreciated i'm new to the art.

Thanks Garrett Millen....
