I do a lot of seining in the breeches and other local streams. For the next month try Hendrickson nymphs size 14 and Grannom Caddis larvae.

They will be hatching about opening day for a week or so. Also BS lake is a shrimp (scud) factory many are small this time of year so size 16 thru 20. Also there are cress bugs in the Breeches in many sections. With the recent stocking almost any buggy nymph should catch some fish.
