The GPS Fishing Guide to PA for iPhone is now pending Apple's approval. This process can take a few days to two weeks. The new version will be available on the App Store immediately upon approval. For current owners, the icon on your phone will tell when the update is ready.

If you want to look at the tutorial designed to teach users how the app works, you can link to it below. I still need to flesh out some images but this covers pretty much everything you might want to know about the new version.

This tutorial is available inside the app or on my website so you can follow along while learning on your phone. I've added so much to this version that I highly recommend you review the tutorial to take advantage of everything new.
