A buddy and I floated the stogie on Saturday from 11-4 and we got the skunk so dont feel so bad. The stogie is a much bigger body of water but at the hottest part of the day the water temp was 46.5. Friday it read 43 so I really think it is too early. We floated a section a good ways below the waterworks dam and had no action working sculpins in deep holes. We even brought a spin rod and searched with tubes with no results.
