[quote]

Few rainbow trout were captured in Section 02 in both 1994 (1 trout) and 2012 (4 trout). Gear and habitat limitations restrict the areas that can be effectively surveyed in Section 02. The best habitat in the pool that was sampled was generally on the Casselman River side, where water temperatures were not suitable for trout. Only a portion of the shallow but colder water on the Yough tailrace side of the pool was able to be sampled using our electrofishing raft.[.quote]

So the answer is they surveyed the smallie water in Section 2 and only a little /shallow trout water.
