It was a year or back where I witnessed herons raping the stream. I don't know about one of them eating 6 fish at one sitting but I did see one eat 3. I was amazed that he could get airborne. I was up by the water plant and could see 6 birds fishing. That stuff adds up quick if you have 25 birds that fish every day. Tossing stones at the birds doesn't even bother them. They have become too comfy fishing for the same pod you are trying to cast at.
