Usually snagging with tandem rigs occurs when you put the two flies too close together.

Agreed. If the flies are close together and you hook a fish on the dropper, you risk snagging that fish with the other fly. Also if you set the hook and miss a fish that hit the dropper fly you risk hooking him with the point fly.

I don't really find snagging a lot of fish a real problem with multiple fly rigs, but logic will tell you two flies will most likely to snag twice as many fish as a single rig... $1 + 1 = 2$     $2 > 1$     $2 \times 1$
