Need some input on a product I'm designing

I am designing a product for the fly fishing industry and am building my test pilot as we speak.

I want to know the following:

What tools you typically have at hand?

How many thread spools you would keep in front of you in a session?

Are you happy with pegs to hold thread spools?

What items do you wish you had holders for while tying?
(bobbin, needle, whip finisher, etc.)

Would you rather have a tool holder/tray, or holes in your tying station for tool storage?

What other miscellaneous tool/ devices would you like to have at your finger tips?

Any thing you would want to add to this would be great. I can't reveal anything about this product yet because it is totally new and nothing like it on the market. I have a potential investor for the patent as well. If I had spoken my idea with you on this please refrain from posting any details, Thanks.

Thanks in advance for the input.
