For tools, drill holes in a piece of 2X4 and be done with it. If need be take a paper hole punch, punch foam dots from a flat foam to line the bottom of each hole to protect scissor points. Looks good, costs practically nothing, stable yet portable.

For spools, the thread racks from the craft store are ok, I was given one, but frankly you are better off keeping these out of the light and dust if you have a large collection, so a drawer is best, or a couple of rows in a tray tackle box or similar. Nylon threads like Danville, Rumpf and UTC are vulnerable to light. Waxed thread attracts dust and most are waxed. If you use them all the time probably doesn't matter too much, though.

Hope that helped.
