I would HIGHLY suggest Kaenon Rhino or Klemm with amber/copper (C28 or C50) lens. Stay away from the C12 or G12 (copper or grey) as they block way too much light for most fishing applications. They retail for \$200 and may be worth that. Watch Sierra Trading Post, Back Country, Ebay, Amazon, etc and you can find them for half that. The Kaenon website has very specific details on frame width, etc. I can personally speak to the widths of Rhino and Klemm both fitting my very fat and wide face. Heck they even fit Shanes fat face. He was shocked at the crystal clarity of the SR-91 lens that they use. You are looking for frame widths of 145mm - 150ish mm.
