the entire set up with case and material holding inserts will be 10 x 12 or so. I just tested it out at lunch in the pack and such. Made it very easy to carry enough materials to tie about 6 different flies, the pack is going to have inserts for tools and inserts that zip to hold material.

Ok, enough detail giving i will be screwed. I am not that worried about the patent because my investor has all of the machines to produce this product, all the discounts on material, an already knows all of the patent stuff. He said a rough guess would be about 7500 for the patent.

The thing I am desinging has nothing like it and to secure a patent on this and to be the only person who can sell something like this would be worth the invest ment. for sure. I am dreaming big but just the functionality of the test pilot is getting me pretty pumped. I hope to get the finalized product developed soon. I need to come up with a way to secure the vice more effectivly. the standard knobs that come with vises leave a lot to be desired for a sturdy hold. I researched knobs with a nylon tip that i think would work a lot better.
