After hanging around this board for the last 6 months or so, I think I can make the general observation that a good many flyfishers catch a good proportion of their trout on woolly buggers and/or other streamers. I only caught one trout on a streamer (rubber leg woolly bugger) last year. I try streamers occasionally when nothing else is working for me, but I rarely have any luck.

I would like to learn the art of streamer fishing this year. I'd like to hear your experience on this topic. Is there a book or DVD I should get? How about links to online articles?
