This year I hope to actually catch something above the dam. It's been more annoying than fun in the past, but I suppose a 9' rod will do that.

Clarks shows how wonderful it can be to have almost all of a waterway open to fishing. Stony is similarly beautiful but access is very limited comparatively.

That link posted about the conservation plan was a great read! Thanks very much for posting, and I urge any other known water-plan .pdf files to be posted for other streams. The Clarks findings have correlated very closely with what I've found in terms of fish populations. I was actually quite surprised how cold the streams stays even in its lowest sections (according to that data). I'd previously thought it was much too warm to support trout below the hatchery/bridge
