What's wrong with warmwater species anyways. I think smallies and rock bass are pretty cool.

Completely agree.

It may just be the case that it's the people who insist on stocking so that they can catch trout out of marginal quality streams who are the real "trout snobs".

I'm in northern Va., where the streams are marginal even for warmwater species. I'd like to see residents of the three wealthiest counties in the U.S. spend some serious money on improving *that*.

Money ain't everything. It can be worth less than nothing, depending what you do with it.
