Suddenly, the statewide unassessed wild trout waters survey program may look pretty good to those few individuals who were challenging its utility, especially if they thought Marcellus play impacts would be limited to the area under which Marcellus shale actually rests. You never quite know in advance where ALL potential impacts of the play will occur.

We have been very involved in Berks stream assessments, reporting testing weekly. Having said that, this pipeline pretty much runs through my backyard and frankly I am cool with a 30 inch line running through Berks. There are plenty of lines already running through here. In a , "whats in it for me" approach, fund grants for monitoring and improvement and keep my ng rates low and we are all good.
