If we are talking about dry flies then the answer is very seldom. Twice a year one when the very large GD are on the main stem and also when BD or big stones emerge on the EB I'll put on a #8 all other times #10 - #22 and most of the time #14 - #18.

Now if we are talking streamers then the answer is all the time. I never use a streamer smaller than a #6 and usually am throwing a #2 or #4. I go as big as #1/0 for trout.
