You certainly can cast that size fly with a 6 weight, but you are over equipped for Hay Creek with a 6 wt. If that's the only rod you have it's fine. I used to fish small streams with a big rod, because that was all I had.

A 4 weight 7'6" rod would be perfect for Hay Creek or any stream that size up to one about the size of the Tully, though I would probably go bigger for the Tully. As to being able to cast a #2 with a 4 weight, if it's a moderately fast rod yes.
