My understanding is that the WCO doesn't want folks to take the time to walk buckets of trout up or down the stream from where the truck stops. The longer it takes to put those trout in the stream the more it impacts on driver time.

I would really like to see more float stocking. This allows those assisting with the stocking to spread the trout out and gives someone who doesn't want to fish with the crowds some hope of fishing over fish at points other than where the truck stops.
